Education

Vellore Institute of Technology, Vellore

Bachelor of Technology – Computer Science Engineering – Information Security CGPA: 9.13

2023-2027

Achievements

DevSoc 26' – Tech for Good Track Winner

2026

- Led a 4-member team to win DevSoc'26 Tech for Good track among 150+ participants by building a scalable civic reporting platform with AI-based issue classification.

Yantra 26' Central Hack – CS & IT Track Winner

2026

- Secured first place in the Computer Science and IT track among 11 problem statements, competing against multiple engineering disciplines including Civil, Mechanical, and Agriculture.

Skills

Languages: Python, JavaScript, Bash

Backend: Django, FastAPI, Node.js, REST APIs, Celery, Simple JWT, Google OAuth2

Frontend: React.js, Next.js, Tailwind CSS, HTML5, CSS3

Database: MySQL, PostgreSQL, MongoDB, AWS Aurora, NeonDB

Testing: unittest, pytest, CI-integrated test pipelines

Cloud and DevOps: AWS (EC2, S3, IAM), Docker, GitHub Actions, CI/CD, Linux, Nginx

AI/ML: LangChain, OpenAI API, spaCy, Isolation Forest

Projects

Civic Issue Reporting Platform | *React, Django, MySQL, Celery, AWS EC2, S3*

- Designed and deployed a production **AWS stack** (EC2 + RDS + S3 + CloudFront + Route53 + ACM) from scratch - configuring Security Groups, IAM roles, and HTTPS termination without managed scaffolding.
- Eliminated stored credentials entirely by implementing **IAM OIDC-based authentication** in GitHub Actions, replacing long-lived access keys with short-lived federated tokens.
- Built fully automated **CI/CD pipelines** with multi-repo `repository_dispatch`, enabling independent frontend and backend release cycles with zero-downtime Unicorn/Nginx reloads on every push to main.
- Reduced cloud costs via **cron-based EC2/RDS lifecycle automation** using GitHub Actions - scheduling infrastructure only during active usage windows, eliminating idle compute spend.
- Delivered a **globally distributed frontend** by deploying Vite artifacts to S3 behind CloudFront with custom 403/404 → `index.html` fallback for resilient SPA routing.

Automated Document Security and Compliance Analysis Platform | *FastAPI, LangChain, spaCy*

- Developed an AI-powered document processing backend analyzing PDF, Excel, PPT, and image files for security compliance violations across multiple formats.
- Built a compliance engine for automated PII detection, pseudonymization, and IAM policy extraction using LangChain and OpenAI API, with NLP processing via spaCy for entity recognition and redaction.
- Integrated Tesseract OCR for image-based content extraction, enabling multi-format document ingestion through a unified REST API layer.

Experience

Backend Engineering Intern – Aquevix Solutions

June 2024 – July 2024

- Increased unit test coverage by **25%** by writing modular unittest test cases integrated into the existing CI/CD pipeline, reducing regression risk on core API endpoints.
- Refactored Python backend modules for improved code reuse and maintainability; applied containerization (Docker) and Git-based version control workflows across the team.
- Contributed to backend feature development and CI/CD automation using GitHub Actions.

Certifications

- AWS Certified Solution Architect(SAA-C03) – Amazon Web Services (2026)
- Meta Back-End Developer Professional Certificate
- Google Foundations of Cybersecurity – Google
- McKinsey Forward Program – McKinsey
